Controlling VividTune and BioUp Tunable White

From wall dimmers to wireless controls, tunable white luminaires are compatible with industry standard 0-10V and DALI controls. One channel to control intensity (brightness) and a second channel to adjust CCT.

Example of Lumen Adjustment Calculation

24CZ2-40HE-UNV-L83050-W2A1-U at 80 CRI tuned to 3500K

Adjusted Lumen = published Im x adjusted Im factor

Adjusted Lumen = 4029×0.956

Adjusted Lumen = 3853 lm

* Lumen adjustment factors are for reference and may be different for each product selected. Refer to IES files for actual performance data on each. Metalux **24CZ2 LED**

"...circadian clock synchronization is paramount to the body's efficient and appropriate functioning." - TM18

BioUp solutions maximize WELL points for Circadian Lighting Design (L03):

Use BioUp to achieve Equivalent Melanopic Lux (EML) thresholds for circadian design and earn nearly 20% of WELL building lighting points

MDER, M-EDI and EML are key metrics used to quantify nonvisual performance of indoor lighting systems.

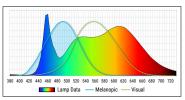

See BioUp white paper for more details

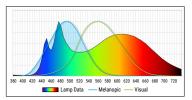

MDER - Melanopic Daylight Efficacy Ratio (MDER) measures the amount of light stimulating to the melanopsin receptors.

Standard 4000K LED

MDER = .62

BioUp 4000K LED MDER = .82

BioUp enhances the LED spectrum with cyan light at 475nm increasing the biological impact of the light to enhance our circadian rhythm which regulates our sleep/ wake cycle, daytime engagement, and mood

all without distorting visual color impression.

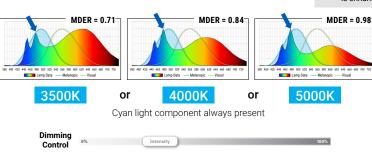

Static (non-tunable)

Static BioUp is used when simple Melanopic Lighting is desired at all times.

Arrow in graph shows BioUp spectrum boost is at 475nm where nonvisual biological response is enhanced.

Dynamic - (Tunable)

Dynamic BioUp is used when Melanopic Lighting is desired to adjust during the day.
